AB Lethal and sublethal responses to 2,4-D (I) [94-75-7], DEF [78-48-8], propanil [709-98-8], and trifluralin [1582-09-8] of various life history stages of the Dungeness crab were examd. to est. max. acceptable toxicant concns. (MATC) of each compd. for this species.

Zoeae

were, in long term tests, the most sensitive stage. Based on the expts. with this stage, MATCs were >0.95 and <6.9 .mu.g/L for DEF, .gtoreq.26

and

<220 .mu.g/L for trifluralin, .gtoreq.80 and <1700 .mu.g/L for propanil, and <1000 .mu.g/L for the **free acid** form of I.

AB Lethal and sublethal respon
